EUR-CL (EPC): B24B055/05

US-CL-CURRENT: 451/451

ABSTRACT:

The guard sector (1) is bent over on the inner edge to form a rim (3) which fits against the neck (6) of the portable grinder. A metal band (5) fits over the rim (3) and can be tightened around the neck by the screw (11) spanning the ends (7,9) of the band. The band is long enough to create a space (15) which can receive the short arm (17) of a bent lever (18) pivoted through a slot (24)

in the band. When closed the lever tightens the band onto the neck
(6). When
the lever is lifted the band is loosened and the guard can be moved
into the
desired working position. USE/ADVANTAGE - Simple and cheap guard for
portable
grinder.
